

When traveling either in my local area or out of state on business or for pleasure, it is beneficial to myself, my company and any vendors I may be meeting to be able to access traffic and weather for those areas, from my car, a rental car or hotel. It is a waste of time to listen to all of the 'music', DJ chatter, advertisements when the information I really need can be obtained quickly from a service for which I pay and subscribe. If I cannot get the information through XM, I would log onto my Handheld and connect through the internet before I would try to find a station in an area foreign to me to get this. I pay for my internet service and can get these same types of information provided as well. If I choose to watch T.V. I pay for the cable to do so as well and none of these channels should be allowed to dictate what the others can broadcast, especially for Traffic and Weather.
